

2009 Focus Drug Formulary In Alphabetic Order

INTRODUCTION

The **Pharmaceutical Horizons Focus Drug Formulary** defines the copayment tier status of the medicines most commonly prescribed. It may not include all drugs covered by your prescription drug benefit. For benefit coverage or restrictions please check your benefit plan document(s).

This listing is revised from time to time as new drugs and new prescribing information becomes available.

The coverage tier for each medication has been indicated. Tier 1 medicines require the lowest member copayment. Higher tier medicines require greater member copayment.

It is recommended that you have this list of medications available when you are with your physician, and a prescription drug is going to be part of the treatment for a clinical condition.

Key to Notations:

PA: Your plan may require authorization or documentation of previous therapy with other similar medications before this medication is covered.

ST: A step therapy protocol may be in place for this medication. Claims for this medication may be covered based on previous medication history. If prior medication history does not meet clinical guidelines, prior authorization may be required.

QL: Quantity limitations (maximum number of tablets/capsules, etc. per month or year) may be in place for this medication.
